

Our brains are wired to be **mono-taskers, not multi-taskers.**

The mental toll of multi-tasking

Multi-tasking is a myth.

The reality is that we are more likely to be task-switching from one thing to another.

Multi-taskers have more trouble organising their thoughts and filtering out irrelevant information.

Task-switching leads to people:

- 🌀 Making more mistakes
- 🌀 Reducing our memory capacity
- 🌀 Feeling more stressed
- 🌀 Getting muddled in our thinking

Coach yourself questions

How could you design your working week to work better for your brain?

What would be the biggest benefits of mono-tasking for you at work?

Ideas for action

1. Carry out an interruption audit

Become more aware of **what / when / why** you're most likely to multitask. Ask yourself:

- 🌀 When do I switch the most at work?
- 🌀 When was the last time I worked for 1hr without being interrupted?

2. Try to mindfully monotask

Allocate time in your diary to **do one thing at once**. Instead of task-switching, the aim is to **use task-sequencing** where you start and finish a task before you move on to the next.

- 🌀 How could you make mindful mono-tasking work with your diary?
- 🌀 How can you communicate it to others?

3. Win - watch

Not all work is equal. It's important to not lose sight of the bigger things that need to get done. Creating a **list of wins to work towards** will keep you committed.

- 🌀 Every quarter, visualise the wins you want to achieve. Keep it visible on your desk/desktop.

4. Game your brain

Turn a 'big' piece of work (e.g. *researching a report*) into a series of 30-minute sprints. Write down your sprints on a piece of paper. *Each time you complete a sprint, mark it off and create a reward*. **By gamifying your progress, you keep yourself motivated.**

5. Find a progress pair

If there is something important that you want to work on, find someone to do it with. *If you can work together in person on the project, even better*. If not, keep the camera on when you are working virtually. **Being visible will help you to stay present and indistractable.**
